Session Outline

- 01.** Introduction to Linked Lists ([Guide](#))
- 02.** Problem Sets
- 03.** Debrief & Q/A

Linked Lists

Types:

- Singly Linked List
- Doubly Linked List
- Circular Linked List

Corner cases:

- Empty linked list (head is null)
- Single node
- Two nodes
- Linked list has cycles.

Techniques:

- Sentinel/dummy nodes
- Two pointers
- Modification operations

PART 02

Problem Sets

Steps to approach the question:

Understand the problem

Take time to carefully read through the problem from start to finish is critical in finding the correct and complete solution to the problem in hand.

Code your solution

Map out your solution before you write any code. Avoid too much time trying to find the perfect solution. Validate your solution early and often.

Manage your time

Don't forget, you have multiple questions to complete within a said time. Make sure you allocate enough time to carefully consider all problems.

Problem 1: Reverse Linked List

206. Reverse Linked List

Easy 15052 252 Add to List Share

Given the `head` of a singly linked list, reverse the list, and return *the reversed list*.

Example 1:

```
graph LR; 1((1)) --> 2((2)); 2 --> 3((3)); 3 --> 4((4)); 4 --> 5((5)); 5 --> null; style null fill:none,stroke:none; 5r((5)) --> 4r((4)); 4r --> 3r((3)); 3r --> 2r((2)); 2r --> 1r((1)); 1r --> nullr; style nullr fill:none,stroke:none;
```

Input: `head = [1,2,3,4,5]`
Output: `[5,4,3,2,1]`

Example 2:

```
graph LR; 1((1)) --> 2((2)); 2 --> null; style null fill:none,stroke:none; 2r((2)) --> 1r((1)); 1r --> nullr; style nullr fill:none,stroke:none;
```

Python3 Autocomplete

```
1 # Definition for singly-linked list.
2 # class ListNode:
3 #     def __init__(self, val=0, next=None):
4 #         self.val = val
5 #         self.next = next
6 class Solution:
7     def reverseList(self, head: Optional[ListNode]) -> Optional[ListNode]:
8
```

Problems

Submit

PROBLEM 1

Approach: Iterative

```
def reverseList(self, head: ListNode) -> ListNode:
```

```
    prev = None  
    curr = head
```

```
    while curr:  
        next_temp = curr.next  
        curr.next = prev  
        prev = curr  
        curr = next_temp
```

```
    return prev
```

Complexity Analysis

Time complexity : Assume that n is the list's length, the time complexity is $O(n)$.

Space complexity : $O(1)$

PROBLEM 1

Approach: Recursion

```
def reverseList(self, head: ListNode) -> ListNode:
```

```
    if (not head) or (not head.next):  
        return head
```

```
    p = self.reverseList(head.next)  
    head.next.next = head  
    head.next = None
```

```
    return p
```

Complexity Analysis

Time complexity : Assume that n is the list's length, the time complexity is $O(n)$.

Space complexity : $O(n)$ The extra space comes from implicit stack space due to recursion. The recursion could go up to n levels deep.

Problem 2: Middle of the Linked List

876. Middle of the Linked List

Easy 7287 194 Add to List Share

Given the `head` of a singly linked list, return the *middle node* of the linked list.

If there are two middle nodes, return the **second middle node**.

Example 1:

```
graph LR; 1((1)) --> 2((2)); 2 --> 3((3)); 3 --> 4((4)); 4 --> 5((5))
```

Input: `head = [1,2,3,4,5]`
Output: `[3,4,5]`
Explanation: The middle node of the list is node 3.

Example 2:

```
graph LR; 1((1)) --> 2((2)); 2 --> 3((3)); 3 --> 4((4)); 4 --> 5((5)); 5 --> 6((6))
```

Input: `head = [1,2,3,4,5,6]`
Output: `[4,5,6]`
Explanation: Since the list has two middle nodes with values 3 and 4, we return the second one.

Constraints:

Python3 Autocomplete

```
1 # Definition for singly-linked list.
2 # class ListNode:
3 #     def __init__(self, val=0, next=None):
4 #         self.val = val
5 #         self.next = next
6 class Solution:
7     def middleNode(self, head: Optional[ListNode]) -> Optional[ListNode]:
8
```

Run Code Submit

Problems

Pick One

< Prev 47/69 Next >

Console Contribute i

PROBLEM 2

Approach:

```
def middleNode(self, head: ListNode) -> ListNode:
    arr = [head]

    while arr[-1].next:
        arr.append(arr[-1].next)

    return arr[len(arr) // 2]
```

Complexity Analysis

Time complexity: $O(N)$, where N is the number of nodes in the given list.

Space complexity: $O(N)$, the space used by array.

143. Reorder List

Medium 7411 258 Add to List Share

You are given the head of a singly linked-list. The list can be represented as:

$$L_0 \rightarrow L_1 \rightarrow \dots \rightarrow L_{n-1} \rightarrow L_n$$

Reorder the list to be on the following form:

$$L_0 \rightarrow L_n \rightarrow L_1 \rightarrow L_{n-1} \rightarrow L_2 \rightarrow L_{n-2} \rightarrow \dots$$

You may not modify the values in the list's nodes. Only nodes themselves may be changed.

Example 1:

Input: head = [1,2,3,4]
Output: [1,4,2,3]

[Run Code](#)
[Submit](#)

PROBLEM 3

Approach

```
def reorderList(self, head: ListNode) -> None:
```

```
    if not head:
```

```
        return
```

```
    # find the middle of linked list [Problem 876] in 1->2->3->4->5->6 find 4
```

```
    slow = fast = head
```

```
    while fast and fast.next:
```

```
        slow = slow.next
```

```
        fast = fast.next.next
```

```
    # reverse the second part of the list [Problem 206] convert 1->2->3->4->5->6 into 1->2->3->4 and 6->5->4 reverse the second half in-place
```

```
    prev, curr = None, slow
```

```
    while curr:
```

```
        curr.next, prev, curr = prev, curr, curr.next
```

```
    # merge two sorted linked lists [Problem 21] merge 1->2->3->4 and 6->5->4 into 1->6->2->5->3->4
```

```
    first, second = head, prev
```

```
    while second.next:
```

```
        first.next, first = second, first.next
```

```
        second.next, second = first, second.next
```

Complexity Analysis

Time complexity : $O(N)$ There are three steps here. To identify the middle node takes $O(N)$ time. To reverse the second part of the list, one needs $N/2$ operations. The final step, to merge two lists, requires $N/2$ operations as well. In total, that results in $O(N)$ time complexity.

Space complexity : $O(1)$, since we do not allocate any additional data structures.
